

Cameroon excavator modified into down-the-hole drill rig

How does a trunnion & rotary rig work?

Unique trunnion & rotary design transfers drilling loads directly from the rotary to the mast thereby reducing weight and stress on the mast. This weight savings allows the machine to be mounted on smaller excavator classes than previous generations of Excadrills. WATSON is a custom manufacturer that welcomes the opportunity to customize rigs.

What is a boom mounted rig?

Boom mounted design brings versatility unmatched by mobile mounted rigs. Tool reach of more than 10 ft from the tracks can be achieved on the proper excavator. Unique trunnion & rotary design transfers drilling loads directly from the rotary to the mast thereby reducing weight and stress on the mast.

Why should you integrate a drill with an excavator?

Integration to the excavator has been carefully managed to limit the overlap of the systems by providing dedicated valve for the drill. By cleanly separating the two systems, diagnostics, servicing and maintenance of the drill can be distinct from the excavator.
