

What is the maximum float of a Howmet screw?

In the case of the Howmet captive screws, the maximum float is 0.060 inch. The Howmet rivetless floating nut plate (FF6010) is fixed at 0.060 inch. The advantage of the fast lead threads is in their clamp down speed, which is the speed of the axial travel of the screw per revolution.

What is the maximum float available in a captive screw?

Many definitions can describe the amount of float available in a captive screw or captive nut assembly. "Total Float" refers to the minimum displacement of the shank/nut as it moves diametrically within the hole. In the case of the Howmet captive screws, the maximum float is 0.060 inch.

What types of holes are suitable for Captive fasteners & rivetless nut plates?

Figure 2 There are three types of holes suitable for captive fasteners and Rivetless Nut Plates installation. This type of hole is suitable where there is a gap or gasket between top and bottom panels or when flush mating of panels is not required. Counter-bore holes maximize holding power and provide flush mating between top and bottom panels.
