What is a good Mini Multi-Tool?

And for a mini multi-tool with a great selection mix and capability, we recommend the Gerber Gear Dime. About the size of a slender-bodied Bic lighter, the Dime has an asymmetrical design that makes locating specific tools simple. Not all of its tools are successes, but the more important ones all do their jobs well.

What is the best multi-tool?

One model was even used to cut the umbilical cord of a newborn lamb. This light and slim multi-tool focuses on well-executed essentials--such as precise, comfortable pliers--and it has no fillers. It's easy to carry daily and built to last. We've tested over 25 multi-tools, and the Leatherman Skeletool CX was clearly the best.

What tools does the skeletool CX have?

It's possible to pick the Skeletool CX apart for the tools it doesn't have. This list includes, scissors, a clamshell cutter, a saw, a file, a can opener, or any of the other tools found on most multi-tools. These are nice tools to have, but adding them would negate the sleek, lightweight form that makes the Skeletool so successful.

What is the best multi-tool in New Hampshire?

Over the past few years, we've tested more than 30 multi-tools in rural New Hampshire--fixing fences, slicing hay-bale twine, even assisting in the birth of a lamb on a cold March morning. And, for years, the Leatherman Skeletool CX has stood out as the best. It has a sleek, lightweight design and a minimal lineup of well-executed essentials.

Is Victorinox a good tool?

The plus side is that the Tinker is a compact, sleek, and elegant-looking tool, but the T4 and Armbar aren't bad in those departments either. Here's hoping that in the coming years, Victorinox can introduce some improvements--a locking blade, easier tool deployment, and a more-functional screwdriver would all be great.
